

February 2, 2017.

We are very pleased to announce that [Procon Systems](#) will represent [Transus Instruments](#) in North America (USA, Canada and Mexico). With more than 25 years of experience supplying, servicing and supporting ultrasonic flowmeters and other high technology metering equipment, we believe Procon Systems is an ideal partner to introduce Transus Instrument's line of Ultrasonic Flowmeters to the North American market.

Procon Systems also engineers and manufactures custom ultrasonic flowmetering systems, and this will provide a valuable resource for our North American and worldwide customers.

Transus Instruments UIM Series are a new generation of high performance ultrasonic flowmeters. UIM-4F Four Path Flowmeters have been tested to meet international standards for custody transfer metering, achieving all requirements including AGA-9 and OIML R137. The UIM-3 Three Path Flowmeters are designed for precise measurement of gas flow in difficult applications such as coal seam and shale well heads, flare gas stacks, landfill and biogas. We look forward providing these cutting edge products to the North American market.

Procon Systems has its head office in Calgary, Alberta with service, manufacturing and warehousing in Edmonton, Alberta. Procon has sales and support offices in western and eastern Canada and the United States. Follow this [link](#) for a list of offices and contact details.
